

AWG 22

AWG 23

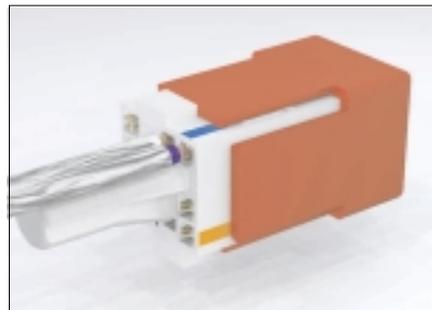

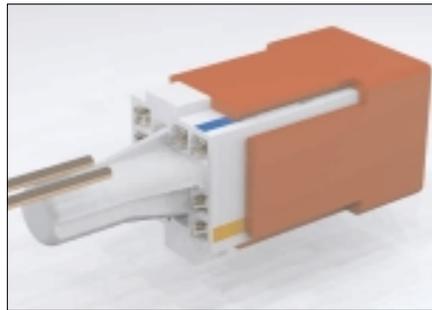

Cable dismantling and preparation

1. Dismantle the cable in a length of minimum 60 mm.
2. Pull the braid back over the cable jacket.
3. Twist the foil of each pair in the same direction as the pairs are twisted.
4. Cut the foil so that the shielded part of each pair is approx. 50mm.
5. Cut the conductors to approx. 10mm unshielded length. (AWG 22) or 12mm (AWG 23)
6. Dismantle each conductor in a length of approx. 6-7mm (AWG 22) or 8-10 mm (AWG 23).

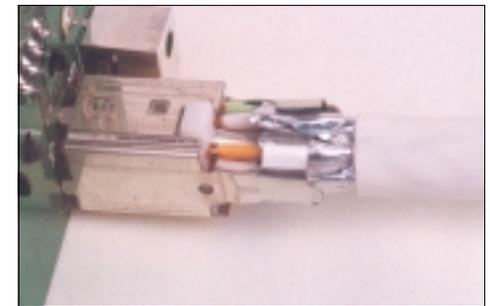

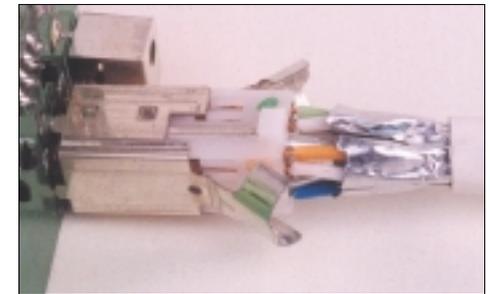

Inserting the conductors in the Pin Holder

7. Start with the blue and blue/white pair.
8. Turn the plastic container so that the smallest knob and the blue marking turns up and the metal cross points towards you.
9. Insert the coloured conductor in the pin closest to the edge and the white conductor closest to the centre of the pin holder.
10. Push both conductors as far as they go. The pins are self-locking.
11. Repeat steps 7 through 10 in a clockwise operation for the pairs orange, green, and brown respectively.

Mounting the Pin Holders in the Patch Panel.

- 1 Place the pin holder with the terminated cable in position for entering the pin holder receptacle on the patch panel WTP module. Orient the pin holder so that the largest knob (and green marking) faces upwards.
- 2 Press the pin holder gently into the receptacle until it stops.
3. Using your fingers, close the shield connector clamps of the receptacle into a tight fit around the cable screen. Tighten the clamps using a strip. (See fig. 4)
4. Put the cable in position and mount the cable strain relief supplied with the patch panel. Tighten the finger screw with your fingers or use an electric drill equipped with our tool for fingerscrews (4905-00)
5. Repeat steps 1 through 4 for the other cables.
